The Sitting and Rising Bed

mobilia Sitting and Rising Bed

Mobility for patients and easier work for nurses

The mobilia sitting and rising bed in its different versions casa, cura and integra enables the patient to get up from the bed again on his own or with very little support.

Turning lying surface – new mobility

The mobilia nursing bed series is suitable for care at home or in an institution. The effects of many illnesses include physical mobility limitations. Such limitations often affect the patient's ability to move. Turning movements are often impossible, sitting up in bed is difficult or even impossible and will considerably limit quality of life.

The mobilia sitting and rising bed is used for many different disabilities and illnesses, e.g. in case of movement impairment, too-low muscle strength, inability to leave the bed, support at limited stress-capacity of the lumbar spine or joints when sitting due to cardiac insufficiency or for mobilisation, etc.. From the mobilia nursing bed, with all standard functions of a regular nursing bed and an additional sitting position as well as the optional rising aid, patients can better see their environment.

The patient's mobility and transfer are made much easier and perceived as pleasant by the patient. The mobilia sitting and rising beds also give the patient new independence and enable him to rise on his own again. For family performing nursing tasks, the nursing environment and nursing staff, the mobilia series makes things much easier. It prevents occupational diseases in nursing staff, supports family members in nursing and improves the patient's quality of life.

Easy mobility – with the rising bed from the mobilia nursing bed series.

Comfort

mobilia cura Shear Lifting Bed

The stable transforming artist

mobilia cura (with its versions mobilia cura, cura e and cura e plus) is one of the two basic versions of our mobilia range. In its basic construction, it is based on a shear-lifting system that particularly represents extreme stability. It also entices with a clear, light-weight design and integrates into any present apartment furnishings.

- Lying surface rotation to either side optional
- Electrically adjustable back, thigh and lower legs rests and height adjustment plus rising aid
- Ground clearance for lifter
- Lying and sitting height smoothly adjustable from 40 - 80 cm (mobilia cura e plus 48 - 80 cm)

Equipment versions

mobilia cura e plus

- Fully electrical lying surface adjustment with rising aid
- Fully electrical turning and rising function

mobilia cura e

- Fully electrical lying surface adjustment
- Fully electrical turning function of the LS

mobilia cura

- Fully electrical lying surface adjustment
- Manual turning function of the LS

mobilia casa Front Lifting Bed

The elegant transforming artist

mobilia casa (with its versions mobilia casa, casa e and casa e plus) is the second basic version of our mobilia range. In this version, the lifting system is integrated into the foot and head parts. This elegant solution offers perfect ground clearance for moving lifter systems under the bed and facilitates cleaning below the bed as well.

- Lying surface rotation to either side optional
- Electrically adjustable back, thigh and lower leg rests, height adjustment and rising aid
- Ground clearance for lifter
- Lying and sitting height smoothly adjustable from 40 - 80 cm (mobilia cura e plus 48 - 80 cm)
